

TRACK PERFORMANCE MANAGEMENT – THE COMPREHENSIVE SOLUTION FOR CONNECTION TRACKS

With our track performance management approach, we offer our customers a comprehensive, integrated service package, ranging from the condition-based inventory of the entire plant or parts of the facility, covering the entire railway law concerns, to conducting regular inspections and maintenance as well as spare parts management for planning and monitoring of project orders.

With our total solutions offer, we primarily turn to operators of connection, industry and harbor railways.

Our infrastructure service companies, such as Logistik Service GmbH, with their many years of experience, expertise and broad expertise in all areas of rail infrastructure - right up to advice on railway operations - are at your disposal for successful implementation.

Advantages for the customer

- » Neutral analysis of the condition of the track network or track parts
- » Industry-specific performance benchmarking confirming the defined asset performance management concept
- » Competence in all technical, economic and legal aspects, guarantees a reliable railway infrastructure
