

INTEGRATED REVERSE LOGISTICS

Disposal of old turnouts with tilting wagons

Description

As part of the just-in-time delivery of fully pre-assembled new turnouts using tilting wagons we can carry back the old turnout with the same wagons in one working step.

So the customer saves a lot of time and space at site and has the option to get recycled turnouts for low traffic routes or temporary solutions.

It is also possible to dismantle the turnout at site and carry the old material with flat wagons to the factory.

The reusable turnout switches are professionally dismantled and recycled in the turnout plant.

Future potential for refurbishment.

Benefits to the customer

Disposal of pre-assembled turnouts

- » No complete dismantling of old turnouts at site necessary
- » No storage of old material at site
- » No separate, later transport of old material required
- » Reduction of freight charges
- » Higher working security
- » Higher track availability
